

# Addendum to the 2023 Annual Report

Oslo, 20 June 2024

This is an addendum to the 2023 Annual Report of Adevinta.

The table on GHG Emissions, included in the section “Climate change” (page 49 of the 2023 Annual Report), is amended as follows:

\* The adjustment in the reported data stems from a unit conversion error in the Vaayu software used for calculating Adevinta’s Carbon Footprint. This led to the application of an incorrect emission factor to the collected primary data for purchased cooling of the offices (in kWh) and therefore resulted in the underestimation of Scope 2 emissions. The error was identified after the publication of the Annual Report 2023. The percentages indicated in brackets represent the variation compared to the initial reported data published in the Annual Report 2023.

<sup>1</sup> Market-based Scope 2 has been used in total.

<sup>2</sup> Emissions of non-CO<sub>2</sub> GHGs have been converted to CO<sub>2</sub>e using the conversion factors from the IPCC’s Fifth Assessment Report.

<sup>3</sup> These figures have been rounded to the nearest whole number.

\*\* We have revised the total Metric Tons of CO<sub>2</sub> equivalent (Mt CO<sub>2</sub>e) for the years 2022, 2021, and 2020. Initially, the sum included both Scope 2 Market-Based and Location-Based totals, whereas Scope 2 Location-Based totals were used to calculate total emissions in the past years.
